The City shall not be bound by any transactions made contrary to procurement procedures.

For the Procurement Official to process a requisition or visa purchase request related to an **emergency purchase**, this form must be completed and submitted by the requesting party to the Purchasing Manager **within 72 hours of an occurrence**.

Emergency procurement pertains to any circumstance posing clear and immediate danger of injury to persons or property or of substantial economic loss to the City of North Port. Sec. 2-408 of the Procurement Code defines "Emergency repairs are those which, if not done immediately, would cause a threat to public health, welfare or safety.

THE CITY MANAGER MUST BE NOTIFIED IMMEDIATELY, FOLLOWED BY THE PURCHASING DIVISION.

In accordance with the City's Procurement Code Section 2-408. Emergency Procurement:

(a) Departments may, with the approval of the Purchasing Manager and without using the normal competitive process, procure emergency

equipment, parts and repairs valued not to exceed \$100,000.00. The City Manager may approve emergency purchases exceeding \$100,000.00, not to exceed \$250,000.00 for the repair of road and drainage equipment, whether mobile or stationary, refuse equipment, marine vessels, public safety equipment, equipment for water and sewer operations, heating and cooling systems or emergency repairs to buildings or infrastructure facilities. Emergency repairs are those which, if not done immediately, would case a threat to public health, welfare or safety.

(b) Emergency procurement of goods or services greater than \$250,000.00 require Commission approval.

(c) All emergency procurements made pursuant to this section shall be documented with a written memorandum provided to and maintained by the City's Purchasing division, outlining in detail the justification for proceeding as an emergency procurement.

Description (?) *

Description of Item(s) Purchased and Detailed Circumstances of the Emergency or Exigency Purchase/Service

Construction is ongoing at the Jeffrey Lake seawall with Thomas Marine Construction, Inc supporting Agreement No. 2023-19. When driving sheet pile for the replacement seawall, an impenetrable rock layer was struck. After much collaboration with the engineer of record (GHD Services, Inc.), a solution was devised to proceed with the sheet pile installation by pre-drilling holes in the rock layer to weaken the rock and allow the sheet pile to be driven through the rock. This solution has required the contractor to utilize additional equipment, including rented equipment, and has significantly slowed the rate at which the sheet pile could be installed. This change order is to account for the additional equipment, labor, and time required to complete the construction of the sea wall following these unforeseen circumstances.

Staff at Public Works are seeking to move forward with an emergency procurement request due to professional evaluation, delays in this project may result in healthy safety and welfare issues. If the City were to experience a significant rain event while the seawall is in the current mid-construction condition, it is likely that the seawall will fail, which may result in significant damage to infrastructure and private property. Additionally, the current detour results in reduced emergency response times.

EXHIBIT A – FEE SCHEDULE

February 13, 2024

Anthony Friedman, PE, PTOE Transportation Engineer City of North Port North Port, FL 34286

RE: Jeffrey Lake Seawall and Sidewalk Reconstruction, Contract 23-2019

SUBJECT: Differing Site Conditions Cost Proposal

Dear Mr. Friedman:

As notified via email on January 17, 2024, and January 19, 2024, the City of North Port was made aware that Thomas Marine Construction encountered a "differing site condition". The following is an account of the additional cost incurred by Thomas Marine due to this unfortunate situation.

Thomas Marine Construction is requesting **\$198,861.23** for additional costs. The price includes the added cost associated with installing the sheet pile due to the differing site condition due to the rock, and concrete around the existing pipe culverts.

During installation of sheet pile, it was determined that the subsoil conditions differ from what plans and geotechnical report show. Note on plan sheet 9 states to drive sheet pile 20' into dark brown fine sand to slightly fine sand with trace shell (SP/SP-SM) with minimum tip at EL -23.87. Geotechnical borings were terminated prior to design minimum tip of EL-23.87 but did not indicate any hard layers in the depth of sample that was taken. Sheet piles were not able to be driven as planned and estimated. TMC explored and exhausted methods to drive sheets given the changed condition. After 1 week of exploration and discussions with the Owner and EOR it was determined that the method to drive the sheets to depths that will support the design loads requires additional time and equipment from original estimate and plan. Predrilling to install sheets to a revised tip depth of EL -18.5 is required. The following cost worksheets represent the extra cost expended to date along with future estimated cost to proceed as discussed. It is estimated to take an additional 24 days and \$198,861.23 to install sheets from what was estimated and planned due to the unforeseen rock and site conditions.

Please let me know if you need additional information or have any questions regarding this matter. I can be contacted by phone (239) 707-0416 or by email at mmabee@tmcfla.com

Sincerely,

Mark D. Mabee Mark D. Mabee Project Manager
